Assignment 3: Interactive Page with Event Listeners

I created a mood diary where the user can log in their mood and better understand their emotions. The site also provides some helpful advice depending on the user's input. There are 12 mood options in a dropdown menu that each correlate to a relevant message of advice. The output for the button also changes depending on the date, emoticon image, mood choice, and reason for mood. I also added 10 radio buttons for the emoticon images that affect the color of the outlook paragraph, which contains the mood value and reason value. Some specific inputs for the reason, or alert box, result in additional customized advice messages. I added a date input control as well. For aesthetic purposes, I made my own handwriting into a custom font and drew some facial expressions to give the diary site a more personalized feel.
